

FYS COIN

Whitepaper v1.0

Built on Base

Token name	FYS Coin
Symbol	FYS
Network	Base Mainnet
Token standard	ERC-20
Total supply	1,000,000 FYS
Contract address	0xb6A109Ab4e8b19302AF25801195b4F74a8b2C4cb
Official website	fyscoin.eu
Official contact	info@fyscoin.eu

Purpose of this document

This whitepaper provides a concise, factual overview of FYS Coin, its technical basis, intended project direction, token supply and public project information. It is informational only and is not investment advice or a promise of future value.

1. Project overview

FYS Coin (FYS) is a digital ERC-20 token deployed on Base Mainnet. The project is intended as the foundation for a digital ecosystem in which FYS may be used for applications, rewards and future services developed within the FYS Coin project.

The project is at an early stage. Features described as planned or future functionality are objectives rather than guaranteed deliverables.

2. Network and technology

FYS Coin operates on Base, an Ethereum Layer 2 network. Token transfers and contract activity are recorded on-chain. Users should independently verify the contract address before interacting with FYS Coin.

Official FYS contract address:

0xb6A109Ab4e8b19302AF25801195b4F74a8b2C4cb

The contract address is the primary technical identifier of the token. Names, symbols and logos can be copied by third parties, so users should not rely on branding alone when identifying FYS.

3. Token supply

The stated total supply is 1,000,000 FYS. This document does not claim that FYS has a guaranteed market price, guaranteed liquidity or guaranteed exchange availability. Any market price depends on actual market conditions and available liquidity.

4. Intended utility and development

The intended direction of FYS Coin is to support an ecosystem in which the token can be used for project applications, rewards and future services. Specific utilities may evolve as the project develops. Any new functionality should be communicated through the project's official website and channels before users rely on it.

5. Founder and transparency

FYS Coin was founded by Faysal Gril, who is presented by the project as Founder & Developer. Public project information, founder information and the project's official contact details are published on the FYS Coin website. The founder's professional LinkedIn profile is linked from the official website to provide additional public attribution.

6. Official information

Website: fyscoin.eu

Email: info@fyscoin.eu

Network: Base Mainnet

Contract: 0xb6A109Ab4e8b19302AF25801195b4F74a8b2C4cb

Users should treat information from unrelated websites, unsolicited messages or unofficial token contracts with caution. Official links should be checked against the project's own website.

7. Risks

Cryptocurrencies and tokens involve substantial risk. FYS may fluctuate in value, have limited or insufficient liquidity, or potentially lose all market value. Blockchain transactions are generally irreversible. Smart contracts, wallets, exchanges, bridges and other third-party services may contain technical or security risks. Users are responsible for protecting their wallet credentials and for assessing legal, tax and financial consequences applicable to them.

8. No investment promise

FYS Coin does not guarantee profit, price appreciation, liquidity, exchange listing or any financial return. Nothing in this whitepaper should be interpreted as financial, investment, legal or tax advice.

9. Document status

Version 1.0 - 31 August 2026. This document may be updated as the FYS Coin project develops. Material changes should be reflected in a newer version published through the official FYS Coin website.

Verification note: Etherscan's token information guidelines emphasize accessible working links, clear project information, an official-domain email address, and updated professional profiles that demonstrate a team member's involvement with the project. This whitepaper is intended to complement, not replace, those requirements.
